Introduction

Welcome to Project Exam 2, designed to challenge candidates to work on a real-world assignment. The assignment will require you to use the skills you have acquired over the last two years. Please read the assignment instructions in this brief carefully.

Assignment Overview

Course Name	Project Exam 2
Assignment Title	Project Exam 2
Credits	As specified in your Study Plan
Duration	6 weeks (Full-time) / 12 weeks (Part-time)
Individual/Group	Individual
Contact for Questions	Course instructor via designated Teams channels

Goal of the Assignment

The project demonstrates skills learnt over the past two years. The final product should reflect the candidate's general development capabilities and visual and technical skills.

Learning Outcomes

Upon successful completion, you will demonstrate:

- Your knowledge of concepts, techniques, languages and professional tools that are used in web development, production and implementation of interactive concepts, solutions and products.
- Your knowledge of concepts, techniques, languages and professional tools that are used in web development, production and implementation of interactive concepts, solutions and products.
- Your knowledge of relevant tools that are used for deploying websites, interactive solutions and products across platforms.
- Your knowledge of concepts, problem-solving and tools that are used for programming in front-end development.
- Your own work in relation to relevant regulations and guidelines for universal design and web standards.
- Your familiarity with the distinctive aesthetic nature of websites and the logical placement of elements inside these websites.
- Your familiarity with the communication between website technology and backend systems.
- Your familiarity with professional publications, talks, online portals and developer communities.
- Your insight into methods of entrepreneurship within front-end development.
- Your insight into opportunities for development, and your ability to keep abreast with current trends and new developments in the field.

INFORMATION

If anything is unclear, contact your designated teachers via a direct message on Microsoft Teams - they are available to help you understand the requirements. It's perfectly fine to ask for clarification. However, teachers cannot provide answers since this assignment functions like an exam. But, they can guide you in understanding the instructions so you can complete your work confidently.

Discussing the course assignment in class channels is strictly prohibited. Additionally, any discussions about the assignment outside of official teacher-student communications, including private messages or in-person conversations with classmates, are not allowed.

Instructions

Description

Holidaze, a new accommodation booking site, has asked you to develop a modern front end for its application. While feature requirements are provided, design and UX are up to you.

Build using the official API documentation.

- **Customer-facing:** users can browse venues and make bookings.
- **Admin-facing:** venue managers can register venues and manage bookings.

Steps to follow

1. Create a GitHub repository and deploy your code.
2. Create a Kanban plan in Trello or GitHub Projects (include a Roadmap View if using GitHub).
3. Create a Figma Style Guide (logo, fonts, colour palette, common components).
4. Create desktop and mobile prototypes in Figma.
5. Use your plan and design documents to complete user stories; commit frequently to main/master.
6. Write a detailed README.md (setup and run instructions).
7. Manually test each user story.
8. Validate with online tools: HTML Validator, Lighthouse, WAVE.
9. Deploy with GitHub Pages, Netlify, or Vercel.
10. Submit required links.

User Stories

- **Visitor:** A user who has not registered or logged in.
- **Customer:** A registered user logged in as a customer.
- **Venue Manager:** A registered user logged in as a Venue Manager.

All Users

- View a list of Venues.
- Search for a specific Venue.
- View a Venue page by ID.
- Register as a Customer or Venue Manager (stud.noroff.no email).
- View a calendar with available and booked dates.

Venue Managers

- Log in and log out.
- Create, edit, and delete a Venue.
- View upcoming bookings for the Venues they manage.
- Update avatar/profile picture.

This walkthrough demonstrates a solution for PE2 by reviewing the following:

- A user with a stud.noroff.no email may register as a customer.
- A user with a stud.noroff.no email may register as a Venue manager.
- A registered Venue manager may create a Venue.
- A registered Venue manager may update a Venue they manage.
- A registered Venue manager may delete a Venue they manage.
- A registered Venue manager may view bookings for a Venue they manage.

06:20

Customers

- Log in and log out.
- Create a booking.
- View upcoming bookings.
- Update avatar/profile picture.

This walkthrough demonstrates a solution for PE2 by reviewing the following:

- A user with a stud.noroff.no email may register as a customer.
- A registered user may log in.
- A registered user may update their avatar.
- A user may search for a specific Venue.

- A user can view a specific Venue page by its ID.
- A user may view a list of Venues.
- A user may view a calendar with available dates for a Venue.
- A registered customer may create a booking at a Venue.
- A registered customer may view their upcoming bookings.
- A registered user may logout.

Permissions

The following libraries and services are approved for use:

Programming Languages

- TypeScript
- Vanilla JavaScript

JavaScript Frameworks

- React (>16)

CSS Frameworks

- Bootstrap (>5)
- Tailwind (>3)
- MUI (>5)
- Styled Components
- CSS Modules

Hosting Services

- GitHub Pages
- Netlify
- Vercel

Design Applications

- Adobe XD
- Figma

Planning Applications

- Trello
- GitHub Projects

RESOURCES

Please read the following API documentation and make use of the Swagger tool to inform your development process:

- [API Documentation](#)
- [API Swagger](#)

Deliverables and Submission

Submit the following in the **file submission section** of the assignment submission on Moodle:

- **Written reflection**

A PDF reflection on the project process that includes:

- Your responsibilities and contributions within the team.
- What worked well during the project.
- Challenges encountered and how they were addressed.
- How you adapted existing skills to new tools, frameworks, or ways of working

INFORMATION

Naming your Reflection

Use the following naming convention for the PDF: "FName_LName_PE2_ClassXXYY.pdf"

Replace 'Class' with the month in which you started studying: Jan, March, Aug or Oct

Replace 'XX' with your class year, e.g. 24, 25, 26

Replace 'YY' with either FT if you are a full-time student, or PT if you are a part-time student

Example

- John Doe began studying full-time in August 2025. John's submission will be named: JOHN_DOE_PE2_AUG25FT.pdf
- Jane Doe began studying part-time in January 2026. Jane's submission will be named: JANE_DOE_PE2_JAN26PT.pdf

Paste the following in the **online text section** of the assignment submission on Moodle:

- Link to your **Kanban board**.
- Link to your **Gantt chart**.
- Link to your **Figma style guide**.
- Link to your **Figma design**.
- Link to your **GitHub repository**.

CAUTION

Keep the following in mind when submitting your assignment:

- **Links**

- Test all links in an Incognito window before submission. Inaccessible links will not be graded.
- Make sure your GitHub repository is public and accessible during grading.
- If the repository is inaccessible or the application link is broken, the code portion will be treated as a non-submission and graded as Not Passed (fail).

- **Submission deadline**

- Do not submit commits or assignments after the deadline; they will not be considered for grading.
- Late submissions are not accepted, with no exceptions.

- **Submission files**

- Use the file upload area to upload the required document, and paste URLs into the text editor section as shown in the image below.

Add submission

File submissions

Maximum file size: 100 MB, maximum number of files: 5

Files

If an assignment requires you to **upload a document**, add it to this section.

You can drag and drop files here to add them.

Online text

Edit View Insert Format Tools Table Help

If an assignment requires you to **share URLs**, copy and paste them into this section.

Grading Criteria

INFORMATION

The Project Exam 2 will be **graded "A to F"**. See more information on this below:

Grade	Meaning
F	0-39: Failed the course and have to do a Resit.
E	40-49
D	50-59
C	60-79
B	80-89
A	90-100

Criteria - Categories and Expectations

Grading will be based on the successful implementation of the project against the following criteria.

Category	Expectations
Design	Appealing theme, WCAG-compliant palette, responsive layout.
Gantt Chart	Clear start/end dates; phases are easy to interpret.
Kanban Board	Bite-size tasks with descriptions; To Do/In Progress/Done; dates and sizing.
User Stories	All completed to a high standard.
JavaScript/TypeScript	Error-free, modular, follows best practices.
Styling	Responsive and uses best practices.

Academic Conduct and Plagiarism

Academic Integrity

Academic integrity requires acting honestly, responsibly, and properly in all education-related work. This includes using sources correctly and giving clear credit when others' work or ideas are used. It also requires submitting your own work, rather than copying or having AI or others complete work on your behalf.

All behaviour and content must comply with Noroff's code of conduct and all applicable local, national, and international laws.

Submissions must not include NSFW or sexually explicit material, hate speech or discriminatory language, abusive, exploitative, or harmful content, or references to illegal activities such as drug use or trafficking.

By participating in this assignment, you agree to use all platforms responsibly and professionally. Any violation of these requirements will result in a failing grade and may lead to exclusion from the assignment, disciplinary review under institutional regulations, and, where required, notification of relevant authorities.

Plagiarism and Cheating

The Noroff Regulations on higher vocational education 2025 ([Chapter 5-1](#)) prohibit cheating and attempts at cheating in all assessments and exams.

- Cheating or attempted cheating in exams or other assessment situations is a serious breach of the school's rules because it undermines trust in the assessment system, gives an unfair advantage over other students, and weakens the value of certificates and diplomas.
- The school must ensure all students are assessed fairly, so no form of cheating is accepted.

Read through the AI Policy shared in the instructions to confirm how you are allowed to use artificial intelligence in your assignment. You may be required to explain any part of your submission, and failure to do so may be treated as suspected academic misconduct.

AI Policy

Allowed Uses

For this specific assignment, you may use artificial intelligence tools only in ways that align with the allowed uses:

- Brainstorming ideas, naming, and wireframe suggestions.
- Explaining concepts you don't understand ("rubberducking").
- Generating boilerplate scaffolding or test data.
- Drafting documentation text that you review and edit.

INFORMATION

If you do use AI in the assignment, you need to:

- Document all AI use in a dedicated AI_LOG.md file or in a clearly labelled section of your README.md.
- Maintain an AI usage log in your project's reflection report that records all AI assistance received.

Example

Tool used: ChatGPT

Date: 12 March 2026

Purpose: Explanation of JavaScript promises to clarify async data handling

Outcome: Improved understanding; code written independently

Restricted / Not Allowed

The following uses of artificial intelligence are prohibited and may be treated as academic dishonesty:

- **Do not** submit code you cannot explain line-by-line.
- **Do not** copy-paste AI-generated code without attribution, understanding, and integration into your own solution.

Resit Information

This is the only free attempt for Project Exam 2.

Failing the assignment means you must do a resit, which may incur a fee without a valid, documented reason (e.g., doctor's note). Contact the Student Success Manager (SSM) for details.
